- Breathable foam, 3D mesh fabric and aerated protection plates
- Clavicle, spine and coccyx protection
- Removable, adjustable leg loops

### MATERIAL

- Polypropylene hard plates
- Soft absorbing structural layer built with plastazote foam

BODY PROTECTION

# COMPRESSION REDUCER X

## TECHNOLOGY **ERGO LOGIC**

The new Scott back protector line has been designed using the Ergologic concept. Ergologic identifies products engineered to increase the performance and support of active and performance driven athletes. We have responded to the demands and needs of our team riders and developed comfortable, performance products that work for athletes of all levels.

### THE NEW VERTABRAE PROTECTIVE SYSTEM

The new Scott back protector collection is built with an innovative central plate and a structural layer system, which allows the protector to move with your body: the VERTEBRAE PROTECTIVE SYSTEM. Like the vertebrae on the human body, the plate system is designed to articulate in three axes to ensure for lateral, extension and compression movements. Due to its geometrical shape and its material the structural layer changes only when it is stressed by the movement of the body.

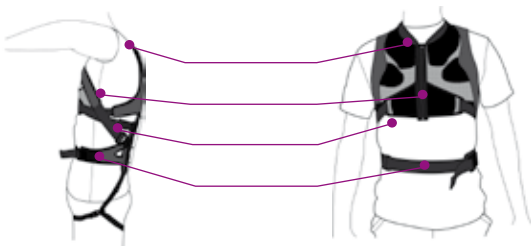

#### 1. FREEDOM OF MOVEMENT

Scott's new Vertebrae Protective System is found on both new back protectors. While most back protectors offer for only forward flexibility, Scott's protectors allow for axial torsion and rotation as well as extension and compression movements.

#### 2. LIGHTNESS AND DURABILITY

Scott Compression protectors are constructed with the best fabrics and impact absorption foam. These fabrics ensure for a very light and durable protector.

#### 3. ADJUSTABILITY AND COMFORT

The combination of shoulder straps, chest and thoracic belt and hip belt delivers maximum adjustability and comfort. The attachment system is designed to alleviate abdominal pressure and allows for increased comfort.

#### 4. VENTILATION

The protection plates are strategically placed to maximize airflow. This combined with breathable fabric keeps you dry.
